Supplement (FUEL) for Pre-partum Sows

Sunglo Feeds • Hesston, KS
 800-366-1354

Sunglo AppeFUEL is a unique nutritional supplement to be given to gilts and sows 0-8 hours prior to the start of the farrowing process. The farrowing process can be extremely stressful on both the mother and the prenatal pigs.

An exhausted sow takes longer to recover from farrowing and her food intake and milk production will be reduced. Providing supplemental nutrition immediately prior to the start of birthing process helps sows cope with this additional stress.
