Worms 101

Intestinal worms have the potential to cause serious damage to the animal's health if left untreated

Tapeworms, roundworms and hookworms are zoonotic — meaning they can all be transmitted to humans!

Tapeworms

- Common throughout the United States and Canada
- Durvet **Triple Wormer™** is a combination broad-spectrum de-wormer that kills the most common tapeworms
- Some tapeworms can grow up to 16' length

Roundworms

- The most common internal parasite of dogs throughout the world
- Almost all puppies less than 3 months of age are infected with roundworms
- Widespread throughout the United States and Canada
- Each female can shed up to 100,000 eggs per day
- Eggs can survive in soil for years
- In just one week, two puppies infected with roundworms can shed over 20 million eggs, contaminating a 2,800 square-foot backyard

Hookworms

- Common throughout the United States and Canada
- 19% of dogs are infected with hookworms
- One adult female hookworm is reported to produce as many as 25,000 eggs a day

The main causes of infection are...

fleas, at birth ingestion of eggs from intermediate host, mother's milk, contaminated soil, and ingestion of infected mammals

Cause of Infections

Worm	Transmission	Symptoms	Diagnosis	Zoonotic
Tapeworms	Ingestion of fleas, mother's milk, uterus, ingestion of infected mammals, contact larvae in the soil	Asymptomatic, diarrhea, intestinal blockage	Visual segments, fecal float	Yes!
Roundworms	Mother's milk, uterus, contact eggs in soil, ingestion of infected mammals	Anemia, pale gums, diarrhea, weight loss, itching	Adult worms in feces or vomit, fecal float	Yes!
Hookworms	Mother's milk, uterus, ingestion of infected mammals, contact larvae in soil	Pot bellied appearance, weight loss, lethargy, vomiting, diarrhea	Fecal float	Yes!

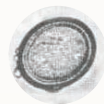

Triple Wormer™ Kills and Prevents:

Tapeworms

1. Tapeworm (Dipylidium Caninum)

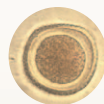

X
